

MAPPEDSKILLS

Brand DNA

The strategic, verbal and visual system that defines how MappedSkills should think, speak, look and behave.

“Judge us on the enquiries, not the traffic.”

THE RESOLVE / Brand system

Version 1.0 • September 2026

The brand in one page

The shortest useful definition of MappedSkills.

MappedSkills helps businesses capture buyer demand, convert more of that demand into real enquiries, and measure the path so marketing can be judged by commercial outcomes - not vanity metrics.

Category	Performance-oriented digital marketing partner.
Primary outcome	Measurable qualified enquiries.
Core system	CAPTURE → CONVERT → MEASURE.
Brand promise	Marketing should make the route from buyer demand to enquiry visible, understandable and measurable.
Hero belief	Judge us on the enquiries, not the traffic.
Enemy	Activity that looks busy but cannot explain whether it created meaningful demand or enquiries.
Personality	Precise, commercially grounded, calm, direct, confident without theatre.
Visual language	THE RESOLVE: light-first editorial surfaces, dark decisive moments, tangerine as the event signal.

Approved plain-English explanation

We help businesses get found by the buyers already looking for what they sell, turn more of those visits into real enquiries, and measure the whole path so they can see what worked.

Purpose, mission and worldview

MappedSkills exists to make digital marketing accountable to a business outcome that matters: qualified enquiries. The brand is not built around channel activity. It is built around resolving the commercial path from demand to action.

Purpose

Make marketing easier to judge by connecting buyer demand to measurable enquiries.

Mission

Help businesses capture existing demand, remove friction between interest and enquiry, and measure the complete journey with enough clarity to make better marketing decisions.

Worldview

- Traffic is not the finish line. It is only useful when it contributes to a meaningful commercial path.
- Channels are tools, not the strategy. SEO, paid search, paid social and conversion work should operate as parts of one system.
- Measurement should clarify reality, not manufacture certainty.
- Good marketing reduces ambiguity: who is looking, what they need, what stopped them, what converted, and what can be improved next.
- Proof must be earned. If a result, statistic, case study or performance claim cannot be supported, MappedSkills does not invent it.

Positioning

MappedSkills should occupy the space between channel specialists who optimise isolated metrics and broad agencies that sell activity. Its distinctive position is the integration of demand capture, conversion and measurement around enquiries.

Dimension	MappedSkills position	Avoid
What we sell	A measurable demand-to-enquiry system	A menu of disconnected marketing services
What success means	Qualified enquiries and a visible path to them	Traffic, impressions, clicks or rankings as ends in themselves
How we work	Capture → Convert → Measure	Channel silos
How we communicate	Commercially clear, evidence-aware	Agency jargon, hype, inflated certainty
How we prove value	Observable evidence and honest limits	Fabricated dashboards, unsupported ROI, decorative numbers

Positioning statement

For businesses that need marketing to create and explain real commercial demand, MappedSkills is the digital marketing partner that connects being found, becoming an enquiry and knowing what worked.

Audience and customer tension

The brand is designed for decision-makers who are not looking for more marketing activity; they are looking for confidence that marketing contributes to pipeline.

Primary audience	Owners, founders and commercial/marketing leaders in businesses where enquiries or leads are a meaningful route to revenue.
Functional need	Generate more relevant demand and improve the percentage of that demand that becomes an enquiry.
Emotional need	Feel in control of marketing rather than dependent on reports they cannot connect to business reality.
Core frustration	"We are getting traffic/activity, but I cannot clearly see what it is producing."
Decision trigger	A gap between marketing activity and measurable enquiries.
Trust requirement	Clear reasoning, transparent measurement, no invented proof and no performance theatre.

The problem language MappedSkills owns

- Traffic but no enquiries.
- Demand exists, but the business is not capturing enough of it.
- Visitors arrive, but too few take the next step.
- Marketing is running, but the path from activity to outcome is unclear.

The operating idea: CAPTURE → CONVERT → MEASURE

Stage	Meaning	Typical disciplines	Question it answers
CAPTURE	Get found by buyers already looking for what the business sells.	SEO, AI search visibility, Google Ads, demand-led paid media	Are the right buyers finding us?
CONVERT	Turn more relevant visits and attention into genuine enquiries.	Landing experience, messaging, conversion optimisation, lead-generation mechanics	Are we making it easy and compelling to enquire?
MEASURE	Connect the journey so decisions can be based on evidence.	Attribution, analytics, event measurement, enquiry-path visibility	Can we see what worked and where the path breaks?

The three stages are semantically equal. Do not visually imply that one stage is larger, faster, more valuable or statistically superior unless evidence supports it.

This system is both strategic and communicative: it gives MappedSkills a repeatable way to explain services without collapsing back into a generic agency service list.

Brand promise and proof discipline

MappedSkills' credibility depends as much on what it refuses to claim as on what it says.

Promise

We will make the demand-to-enquiry path clearer, improve the parts we can influence, and measure it honestly.

Proof rules

- **Never fabricate:** case studies, testimonials, client results, ROI, revenue impact, statistics, logos, awards, team size, history, coverage or client counts.
- **No quantitative-looking decoration:** geometry, charts or dashboards must not imply performance data when none exists.
- **State limits:** conceptual diagrams may explain a system, but should not masquerade as measured outcomes.
- **Prefer structural proof:** show the process, measurement logic, state differences, implementation details and what can/cannot be tested.
- **Keep claims auditable:** if a claim cannot be traced to evidence, rewrite it as a method, principle or intended outcome.

Messaging architecture

Layer	Message	Role
North star	Judge us on the enquiries, not the traffic.	The memorable commercial belief.
Outcome	Measurable qualified enquiries.	The result language to repeat consistently.
System	Capture → Convert → Measure.	The explanatory framework.
Explanation	Get found by buyers already looking; turn more visits into enquiries; measure the path.	The plain-English sales explanation.
Proof posture	Show what is known, what is measured and what cannot yet be claimed.	The credibility layer.
CTA	Talk to us / make an enquiry.	Commercial action; booking remains secondary.

Message hierarchy

- Lead with the commercial problem or outcome.
- Explain the system in plain English.
- Use channel/service detail as supporting evidence, not as the headline identity.
- Close with a direct enquiry action.

Voice and tone

Trait	Do	Do not
Direct	Use short, declarative language and name the business consequence.	Pad ideas with agency filler.
Commercial	Connect marketing language to enquiries, decisions and outcomes.	Treat clicks, reach or rankings as sufficient proof.
Precise	Say exactly what is measured, intended or unknown.	Use vague superlatives or false certainty.
Calm confidence	Sound assured because the logic is clear.	Shout, boast or overuse exclamation marks.
Human	Use familiar business language.	Hide behind technical jargon.
Evidence-aware	Distinguish fact, interpretation and ambition.	Turn assumptions into claims.

Preferred language

Use: enquiries, buyers, demand, get found, convert, measure, path, evidence, what worked, friction, real enquiries, qualified enquiries.

Use carefully: leads, performance, growth, ROI, revenue, results - only when the context and evidence support them.

Avoid: game-changing, revolutionary, 360-degree, full-service, guaranteed, skyrocket, dominate, secret sauce, world-class, best-in-class, cutting-edge as empty decoration.

Visual DNA: THE RESOLVE

THE RESOLVE is the active MappedSkills design language. It should feel editorial, intentional and commercially decisive rather than decorative or 'agency flashy'.

Token	Value	Role
Ground	#F7F3EC	Warm editorial page ground
Paper	#FFFDF9	Clean content surface
Ink	#141219	Primary text
Ink Deep	#0F0D14	Dark decisive stages / hero
Tangerine	#FF5B04	Event, emphasis, action
Tangerine Dark	#D94400	Deeper active accent
Tangerine Deep	#A83400	High-contrast deep accent

GROUND	PAPER	INK	INK DEEP	TANGERINE
#F7F3EC	#FFFDF9	#141219	#0F0D14	#FF5B04

Typography

Headings: Bricolage Grotesque. **Body/UI:** Manrope. Use strong scale and whitespace rather than excessive decoration. The type system should feel contemporary and editorial, not tech-startup generic.

Composition, imagery and motion

Composition principles

- Light-first overall, with dark hero or decisive stages where contrast earns attention.
- Use tangerine for events, actions and moments of resolution - not as a blanket background everywhere.
- Prefer asymmetry, editorial offsets and meaningful spatial contrast over repetitive card grids.
- Use full-bleed orange selectively for strong CTA moments.
- Dashed or hatched honesty fills are acceptable when they communicate uncertainty, boundaries or conceptual states.
- Avoid generic decorative filler, fake dashboards, gratuitous shadows and ornamental UI that does not explain anything.

Imagery

Visuals should explain marketing reality: demand becoming enquiries, before/after states, claim/evidence relationships, system anatomy and points of friction. Photography or illustration should earn its place by adding meaning or human context; avoid generic 'team around laptop' stock imagery.

Motion

Motion should clarify transitions or draw attention to an event, then settle. The rhythm is **calm** → **event** → **calm**. Avoid looping spectacle, sticky/pinned narrative sections and animation that increases cognitive load without adding understanding.

Experience principles

Principle	Implication
Commercial clarity first	A visitor should understand what MappedSkills does and why it matters before being asked to decode service jargon.
Meaning survives without JS	Progressive disclosure can enhance scanning, but important meaning should remain available without JavaScript.
Responsive by design	Narrow ≤ 760 , Medium 761-1080, Wide ≥ 1081 . Layout changes should preserve hierarchy, not merely shrink desktop.
One clear route to enquiry	Commercial CTAs lead to /contact. Booking is secondary.
Protected functional surfaces	Contact, schedule-call and thank-you are functional assets; redesign must not compromise them.
No sticky storytelling	Do not use fixed/pinned narrative mechanics as a default brand device.
Accessibility through restraint	Readable contrast, semantic headings, native controls and reduced-motion behaviour are part of the brand quality bar.

Service architecture

MappedSkills can talk about multiple disciplines, but they should always ladder back to the same commercial system.

Area	Brand role
SEO	Capture buyer demand through search visibility.
AI SEO	Extend discoverability into emerging AI-assisted search/discovery contexts without overclaiming certainty.
Google Ads	Capture high-intent demand through paid search.
Social Media Ads	Create or capture relevant paid-social demand where appropriate.
Conversion Optimization	Reduce friction between visit and enquiry.
Lead Generation	Connect demand capture and conversion to an enquiry outcome.
Measurement	Make the path visible enough to understand what worked and where it broke.

Rule

Never let the service list become the brand. The brand is the demand-to-enquiry system; services are the tools used inside it.

Brand behaviour: do / don't

Do	Don't
Start from a business tension.	Start from a channel feature list.
Say 'measurable qualified enquiries'.	Default to vanity metrics.
Show the path from demand to action.	Use decorative funnels or dashboards as pseudo-proof.
Use evidence and explicit limits.	Invent results to make the story stronger.
Be visually bold through composition.	Add noise, gradients, shadows and motion just to feel 'creative'.
Keep CTAs direct and commercial.	Scatter competing actions everywhere.
Protect functional journeys.	Let redesign compromise forms, booking, consent or measurement.
Use conceptual diagrams honestly.	Make conceptual geometry look like measured performance.

Brand guardrails

These are non-negotiable because they protect the distinctive character and credibility of MappedSkills.

- **Outcome:** measurable qualified enquiries remains the primary commercial outcome language.
- **System:** CAPTURE → CONVERT → MEASURE remains the core explanatory framework.
- **Proof:** unsupported results, statistics and social proof are prohibited.
- **Visual identity:** THE RESOLVE remains the active design language unless deliberately replaced through a future brand decision.
- **CTA architecture:** commercial CTAs route to /contact; booking remains secondary.
- **Function:** consent, analytics, enquiry persistence, attribution, robots/sitemap and booking behaviour are not decorative design territory.
- **Homepage:** the accepted homepage composition is protected; changes require a real reason, not novelty.
- **Motion:** no sticky/pinned narrative and no looping animation as default devices.

Practical copy system

Headline patterns

- **Outcome:** “More [valuable action]. Less [vanity/activity].”
- **Problem:** “You have [demand/activity]. Why is it not becoming [commercial outcome]?”
- **Accountability:** “Judge [marketing/us] on [business outcome], not [proxy metric].”
- **System:** “[Capture]. [Convert]. [Measure].”
- **Evidence:** “What we can measure. What we cannot claim yet.”

CTA language

Primary actions should sound like the start of a useful commercial conversation: **Talk to us, Make an enquiry, Tell us what is not working.** Avoid artificial urgency unless there is a genuine deadline.

Microcopy

Be explicit about what happens next. Form, consent and measurement language should be understandable without legal or analytics expertise. Clarity is part of the brand.

Brand governance checklist

Before publishing a new page, campaign, deck, proposal or major design asset, ask:

- 01 Does it connect to buyer demand, conversion or measurement?
- 02 Is the commercial outcome clear?
- 03 Are we using 'enquiries' consistently where that is the real outcome?
- 04 Is every factual performance claim supportable?
- 05 Have we accidentally implied data through decorative numbers or geometry?
- 06 Does the tone sound direct, precise and commercially grounded?
- 07 Does the visual execution feel like THE RESOLVE rather than generic agency design?
- 08 Is tangerine being used as emphasis/event rather than visual wallpaper?
- 09 Is the CTA obvious and appropriately routed?
- 10 Does the experience remain understandable and usable on narrow, medium and wide screens?
- 11 Have we protected forms, consent, measurement and booking behaviour?
- 12 Are we adding something because it improves meaning - or merely because it looks impressive?

If a new asset is recognisably MappedSkills without relying on the logo, the Brand DNA is doing its job.

Canonical brand summary

MAPPEDSKILLS = BUYER DEMAND → REAL ENQUIRIES → MEASURABLE PATH

We believe	Marketing should be judged by the commercial path it creates, not by activity alone.
We help	Businesses capture buyer demand, convert more of it into enquiries and measure what worked.
We promise	Clarity, commercial focus and honest measurement.
We sound	Direct, precise, calm, human and evidence-aware.
We look	Editorial, bold, warm, dark-at-decision-points, tangerine-at-events.
We refuse	Fabricated proof, vanity-metric theatre, generic agency language and decorative complexity.
We repeat	Measurable qualified enquiries. Capture → Convert → Measure.
We are remembered for	“Judge us on the enquiries, not the traffic.”

This document consolidates the accepted MappedSkills strategy and THE RESOLVE design system into a practical brand operating guide. It intentionally does not invent customer proof, performance statistics, corporate history, team facts, or other unsupported brand claims.
